

A leading independent consultancy in water management and sustainability

Surveys for Water Management and Sustainability

Weetwood is a leading consultancy specialising in the water environment.

We provide specialist survey capabilities for river studies and associated projects. Our experience ranges from topographic surveying for flood modelling studies through to habitat surveys for the Environment Agency.

Our familiarity with hydraulic modelling allows us to provide an efficient service to produce data for use in river, drainage and IUD models. Similarly, our staff have extensive experience in mapping assets for the water sector. We utilise our own GPS equipment with other techniques as necessary to provide cost effective solutions for the client.

For more information, please contact Jenny Hand at our Leeds office:

Site Surveys

- Small to medium scale topographic surveys for flood risk assessment preparation & land management purposes
- GIS mapping of site services to determine location and condition
- Site investigation works to determine the permeability of the underlying soil
- Water efficiency audits

River Surveys

- River channel surveys for input into 1D/2D hydraulic models
- Floodplain surveys & mapping of major features for input into 2D hydraulic models
- Post flood event data collection for the Environment Agency
- River Habitat Surveys by Environment Agency accredited staff
- River corridor surveys to inform our work on river restoration and water quality

Asset Mapping

- GPS/GIS data capture and mapping of assets for local authorities and utility companies
- Asset condition & maintenance surveys, including project management of contractors
- Utilisation of GIS to combine archived, remotely sensed and surveyed data sets for a final client-focused product
